Physical activity

S4 Fig. Age- and sex-specific relative risks of cancer incidence according to 81 combinations of adherence to cancer prevention guidelines. Smoking: 0, never; 1, former; 2, current smoker. Alcohol consumption: 0, non-drinking (0 g/day); 1, moderate drinking (≤ 50 g/day); 2, heavy drinking (> 50 g/day). Physical activity: 0, very active (5 or more time a week); 1, moderate (1-4 times per week); 2, inactive (< 1 time per week). Body mass index (BMI): 0, normal weight (< 23.0 kg/m²); 1, overweight (23.0-24.9 kg/m²); 2, obesity (≥ 25.0 kg/m²). Reference group: full adherence to healthy lifestyle (combination of never smoking, no consumption of alcohol, normal BMI and physically very active). Bold fonts indicate statistically significant according to a Bonferroni-adjusted significance level of 0.000625. Gray and italic fonts indicate cells with insufficient number of cases. HR, hazard ratio.
