

S4 Table. Comparison of ALBI associated parameters between liver metastasis and no liver metastasis in stage IV patients

	Liver metastasis patients (n=76)	No liver metastasis patients (n=35)	p- value
ALBI-pre			
Low	55 (72.4)	25 (71.4)	
High	21 (27.6)	10 (28.6)	> 0.99
ALBI-post			
Low	58 (76.3)	29 (82.9)	
High	18 (23.7)	6 (17.1)	0.596
ALBI-trend			
Group 1	46 (60.5)	20 (57.1)	
Group 2	9 (11.8)	5 (14.3)	
Group 3	12 (15.8)	9 (25.7)	
Group 4	9 (11.8)	1 (2.9)	0.314

Values are presented as number (%). The liver metastasis group was defined to include patients with only liver metastasis and patients with both liver metastasis and other organ metastases. ALBI, albumin-bilirubin.
