

**A****B**

**S4 Fig.** Eicosapentaenoic acid (EPA) promotes cell growth in CAOV3 and A2780. Dose-response curves of EPA in CAOV3 cells (A) and A2780 cells (B). The cells were treated with the indicated concentrations of EPA for 24 hours, and cell growth was evaluated by CCK8. Values are normalized to the percentage of cell growth in control wells (n=3). \*p < 0.05, \*\*p < 0.01.
