A) Survival analysis	B) Histogram options	C) Survival curve according to the cutoff value

D) Distribution of patients according to the two groups

Pt No	% Total	Events	Rate	Rank	Range
151	18.26	33	21.85	0 to 145	15.22 thru 20.71
676	81.74	76	11.24	146 to 752	20.72 thru 36.79
827	100.00	109	13.18	0 to 752	15.22 thru 36.79

S3 Fig. Defining cutoff value of body mass index (BMI) for prediction of recurrence-free survival in the training set (n=827). The optimal cutoff point of BMI for prediction of recurrence-free survival is shown on histogram as 20.71 kg/m^2. Kaplan-Meier curve of each BMI subgroup is also shown.
