

A) Genes upregulated in the PR group

B) Genes upregulated in the SD/PD group

S8 Fig. Survival plots for DEGs between the PR group and the SD/PD group based on OP tissues. (A) DEGs upregulated in the PR group and (B) DEGs upregulated in the SD/PD group. Each plot contains survival curves for groups with high and low gene expression in OP samples. DEGs, differentially expressed genes; OP, operation; PD, progressive disease; PR, partial response; SD, stable disease.
