

S5 Fig. Survival analysis of tumor necrosis factor receptor superfamily member 12A (TNFRSF12A) with Gene Expression Database (GEO) data. (A-G) Kaplan-Meier curves showing relevancy between TNFRSF12A mRNA level and overall survival for breast cancer, lung cancer, brain cancer, bladder

cancer, prostate cancer, skin cancer, and liver cancer patient data from GSE1456, GSE3141, GSE4412, GSE5287, GSE16560, GSE19234, and GSE54236, respectively. (H) Kaplan-Meier curves showing relevancy between TNFRSF12A mRNA level and disease-free survival for rectum cancer patient data from GSE40492.
